ACTIVE STANDING

EasyStand®

Glider

Medium & Large

Active standing provides lower body range of motion and upper body strengthening. Unlike passive standers, users move the handles with their arms (or a caregiver can assist) which creates a reciprocal movement in the legs. The full range seat has hinged, break-away sections for each leg that allow full leg, hip and ankle extension while standing. This advanced stander enhances the medical benefits of standing and keeps the body in shape for medical breakthroughs. Numerous research studies suggest that use of an active standing frame can positively affect an individual's health.

The Glider

Active Standing

- Active standing technology in the Glider enhances the many health benefits of a passive stander. The Glider combines enhanced lower-body range of motion with upper-body strengthening.

Movement

- Promotes movement of ankles, knees, and hips creating greater range of motion, increased respiration and cardiovascular endurance and weight bearing on the long bones is increased while gliding. Adjustable resistance cylinders allow the user to start with minimal resistance and increase as they become stronger. The Glider handles allow an attendant to assist in movement, which is especially important for new users.

Safer

- The three point system of padded knee pad, seat, and chest pad provides the individual with support in all positions from sitting to standing. No straps to worry about.

Quick Use

- For those that self-transfer, it is a quick lateral transfer. Flip the knee pad down and transition to standing.

Comfortable

- Critical areas are padded so the knee pad, seat, back and front pad are always well cushioned. Roho® seat cushion for those with pressure management issues is also available.

Advantage

Acclimated Standing

- Newly injured and those who have not stood recently often need to acclimate to standing. Sit-to-Stand allows a user to stop at any point between sitting and standing.

Full Hip and Knee Extension

- Glider allows for a full stretch of the hips, knees and ankles when gliding. Gliding enhances all the health benefits of standing.

Modular Design

- Accommodates both users needing minimal support and those who require significant positioning to go from sitting to standing. Over 35 different positioning options, developed with advice from therapists, can accommodate the most severe disabilities. Additionally, disabilities such as Multiple Sclerosis and ALS are progressive, and positioning options may need to be added over time. Our modular design helps stand those with the most difficult positioning challenges.

Prepares You for Exoskeleton Walking

- According to regulatory approval of exoskeleton products, prior to using an exoskeleton walking device, users should be able to stand in an assistive standing device (e.g., EasyStand Glider). Being able to stand comfortably for longer periods of time and getting a proper stretch, makes the Glider the ideal partner for pre-walking needs before starting a walking program.
